

GMP Dynamic Sourcebook, version 2.1 – Appendix K.7 Possible Approaches for organizing a Final GMP

TABLE K.1. A PUBLIC PLAN COMPARED TO A PARK IMPLEMENTATION PLAN

A Plan for the Public	An Implementation Plan for Park Staff
<p>Summary The Plan Next Steps</p>	
<p>Introduction — The Park in Context Region and Setting The Park Enabling Legislation — describe with the actual legislation in the appendix? Background — What is the purpose of the GMP? What do we hope to accomplish and what issues did we need to address?</p>	<p>Introduction / Overview What is the purpose of the GMP? How was the plan developed? What do we hope to accomplish and what issues do we need to address? (This section could include the issues that the park wanted to address in the GMP and the implementation steps necessary to address them. See the examples for Santa Monica Mountains, Zion, Redwoods, and Pictured Rocks.)</p>
<p>The Foundation Statement Purpose of the Park — Why was it set aside? Significance of the Park — Why is the park so special and important? Fundamental Resources and Values — What resources are critical to maintaining the park’s purpose and significance? Other Important Resources and Values — What resources are particularly important to park management and planning, although they are not related to the park’s purpose and significance? Primary Interpretive Themes — What should all visitors know about the park? Special Mandates — What specific agreements or legal mandates may influence management of the park?</p>	<p>The Foundation Statement Same as the public plan.</p>
<p>The Plan (the alternative being implementing) Park Policies and Priorities (the baseline) — What we considered when making management decisions regardless of the alternative chosen. Concept — What is the vision for the future of the park? (Description of the alternative from Chapter 2 of the GMP/EIS.) Management Zones — A zone describes (for example) the array of desired conditions for both resources in the park as well as visitor experiences that are (will be) maintained in the park <i>within that zone</i>. (Could be the table or text in conjunction with maps) Indicators and Standards — How will we know when we get there? Application of a management zone — Given the menu of options within a particular zone what does the park plan to do in a particular area? (Maps and text) Boundary Adjustments — Recommended changes in the boundaries of the park and the rationale. Other (e.g., Wilderness, Land Transfers) Issues Addressed by the GMP — The issues that the park wanted addressed in the GMP and the implementation steps necessary to address them. (See attached examples for Santa Monica Mountains, Zion, Redwoods, and Pictured Rocks.)</p>	<p>The Plan (the alternative being implemented) Concept — What is the vision for the future of the park? (Description of the alt from Chapter 2 in the GMP/EIS) Management Zones — A zone describes (for example) the array of resource conditions and visitor experiences that are (will be) maintained in the park <i>within that zone</i>. Application of a management zone — Given the menu of options within a particular zone, what does the park plan to do in a particular area? (Maps and text) Boundary Adjustments — Recommended changes in the boundaries of the park and the rationale. Other (e.g., Wilderness, Land Transfers) Implementation of the Plan — Future plans and studies that would be required for implementation.</p>

A Plan for the Public	An Implementation Plan for Park Staff
	<p>Resources in the Park — Move beyond the fundamental resources. This is the “pull out” sections that could be handed to park resource staff during implementation.</p> <p><u>Note: This is the biggest difference between the two approaches.</u></p> <p>In addition to the information presented in the affected environment of the EIS this section would include the array of facts and figured collected during preparation of the GMP. This section could serve as a general reference for park resources staff and others. This information would could help guide implementation and contribute to plans that tier off the GMP.</p> <ul style="list-style-type: none"> Cultural Resources Natural Resources Visitor Experience Park Operations Other (e.g., Concessions) <p>Questions to Consider:</p> <p>Would this be an appropriate place to keep track of details such as all listed structures in the park?</p> <p>What about the individual projects that the projects wants to undertake in particular areas?</p>
<p>Appendixes:</p> <ul style="list-style-type: none"> ROD/FONSI Legislation Service-wide legal and policy requirements Implementation related information from the GMP – could include cost estimates as well as other materials prepared for the GMP 	<p>Appendixes:</p> <ul style="list-style-type: none"> ROD/FONSI Legislation Service-wide legal and policy requirements – if needed
