

Removal of Non-Contributing Structures – Verna House, Garage and Chicken Coop
Photos

Front (west) elevation of the Verna house (right) and garage (left). The west elevation is built into the side of the knoll. The buildings will be razed. The hole left by their removal will be filled with clean fill, graded and seeded.

Front (west) elevation of the Verna garage. The west elevation is built into the side of the knoll. The building will be razed. The hole left by its removal will be filled with clean fill, graded and seeded.

South elevation of the Verna house. Note how the slope of the knoll descends around the house. The east elevation is built into the side of the knoll. The building will be razed. The hole left by its removal will be filled with clean fill, graded and seeded.

South and east elevation of the Verna house and east elevation of the garage. Note how the slope of the knoll descends around the house. The east elevation is built into the side of the knoll. The buildings will be razed. The hole left by their removal will be filled with clean fill, graded and seeded.

South and east elevation of the Verna chicken coop. The building will be razed.
