Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Deanna Richardson

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Martha Vest

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Carolyn Long

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ron Martin

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Owen

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barton Grimm

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jonathan Hunt

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Marlowe Mager

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Morgan Clark

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

cara busch

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barret Hedeem

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Guffy

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sarah Evans

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Erica Reichert

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Regina Knapp

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Martin Fox

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Eileen Chieco

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Gerke

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

marie kane

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Leslie Tetrault

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Jamie Macke

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Frank Caffrey

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Beldin

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Drescher

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

H K Strahlendorf

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Hildegard Hix

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nicole Fox

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Rhonda Richardson

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Gano Lemoine

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Susan Richmond

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barbara Abbott

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Hal Trufan

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

kevin ringgenberg

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Maria Hughes

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Yvette LaVallee

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Patricia Miller

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I FERVENTLY INSIST for you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures

are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nancy Kissock

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Fred Abrams

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ruth Olson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

John Seider

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mark Schneider

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

keith landon

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

meganne forbes

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Brenda Eastlake

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Alycia Zeleny-Huber

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Glenn Himebaugh

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Blake Vonderheide

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Richard Berggren

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Leland Long

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mel Wolters

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Holiday Houck

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bonnie Margay Burke

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

James Salter

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Charles Jonaitis

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Couling

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Dawn Kosec

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Filip

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Emily Heinlen

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sharon Nicodemus

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Angela Congdon

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

John Davis

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Ron Brock

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Prof. John Delevoryas

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Lydia Swystun

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sherry Weiland

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sara Schell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Audrey Carlson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Karen Rubino

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Black

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Angie Blake

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

greta Ratliff

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Wilbur Spangler

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Eric Bronner

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Judith Vincent

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Greta Guarton

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Michael Laird

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Sue Vallejo

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Paul Garber

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Taylor

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Elyse Coulson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Margaret Murray

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cathleen Krahe

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Harriet Helman

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

J. Stephen Adams

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tim Nagle

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bette Grant

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Linda Rae

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Julian B

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Richard Leonard

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Terri Stratton

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

HARMER WEICHEL

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Chuck Shiebler

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Martha McDonnell

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Bill T Smith

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Frederick Van Doorninck

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Martha Brimm

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Nanette Oggiono

The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

William J. Smith

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Beaulieu

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Barbara Carr

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

freda white

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Tanya Irby

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Cynthia Sampson

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

You should ensure further protection by minimizing roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Also, direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor. Motorized and mechanized travel have been proven inappropriate in any park's backcountry.

There should be restricted access to the park's sensitive archaeological sites, and the Park Service should conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mary Traynor

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

B L Nowak

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

David Gordon

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve.

Please add sand sheet lands in the northwest corner of the park
to your wilderness proposal. Only one gravel road separates them
from other deserving wilderness. Wilderness protection becomes
increasingly important given that you propose this area as a
backcountry access zone: please recommend wilderness protection
for lands not slated for access roads and parking lots if such
structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

In addition, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor. Motorized and mechanized travel are inappropriate in the park's backcountry.

There should be restricted access to the park's sensitive archaeological sites. I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Kate Fielder

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

May I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. My husband and I know that the wilderness will also help ensure that our son's children may continue to enjoy the park's solitude, quiet, and astonishing range of landforms and species.

Having enjoyed one accomplishment, it is to your advantage to add to it. Therefore, I strongly suggest you add sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for your time and patience in considering my comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I applaud the proposal to add nearly 51,000 acres of wilderness
to Great Sand Dunes National Park and Preserve which is in the
preferred alternative of your draft management plan's.
Wilderness will help protect the park's natural and
archeological resources. It also will help ensure that future
visitors will have opportunities for solitude and quiet.

While I support the wilderness proposal put forth, I urge you to
add sand sheet lands in the northwest corner of the park to your
wilderness proposal. Only one gravel road separates them from
other deserving wilderness. Wilderness protection becomes
increasingly important given that you propose this area as a
backcountry access zone: please recommend wilderness protection
for lands not slated for access roads and parking lots if such
structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative

access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Mark Arnold

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I enthusiastically support the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands (those not occupied by ranch buildings, the administrative access road and Closed Basin Water Project facilities) from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

We commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named. Wilderness will also help ensure that future generations may continue to enjoy the park's solitude, quiet, and quite astonishing range of landforms and species.

Regardless, we strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that we very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

We very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, we urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, we strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering our comments.

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I urge you to add sand sheet lands in the northwest corner of
the park to your wilderness proposal. Only one gravel road
separates them from another deserving wilderness.

Please propose wilderness protection for wilderness-quality
lands surrounding Medano Ranch. The sabhka, a fundamental park
resource, is underrepresented in the wilderness proposal, and
unimproved two-track roads should not disqualify these lands
(those not occupied by ranch buildings, the administrative
access road and Closed Basin Water Project facilities) from
wilderness protection.

To the extent possible, please minimize roads and parking lots

within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities.

Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that

I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Timothy Hissam

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named.

Having said that, I strongly urge you to add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Please also propose wilderness protection for wilderness-quality

lands surrounding Medano Ranch. The sabhka, a fundamental park resource, is underrepresented in the wilderness proposal, and unimproved two-track roads should not disqualify these lands from wilderness protection.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Laura Jobe

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

In 1962, when I was working for the National Park Service at the
Omaha Regional Office, I visited what was then Great Sand Dunes
National Monument and spoke with the Superintendent. I was then
a GS-9 and so was he, even though he was about 20 years older
than me. I marveled at the lonely isolation of the place, but he
said that if only they could get more visitors, the
superintendency would qualify for a higher civil-service rating.
I'm sorry he felt that way!

To the extent possible, please minimize roads and parking lots
within the park and try to locate new motorized access outside
the park, primarily on existing roads, through cooperative
agreements with other governmental agencies and relevant

entities. Please direct trails and visitor use away from sensitive riparian zones, such as the Deadman Creek corridor, and please note that I very much believe that motorized and mechanized travel are inappropriate in the park's backcountry.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I appreciate the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help ensure that future generations may continue to enjoy the park.

I also ask that you add sand sheet lands in the northwest corner of the park to your wilderness proposal. Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

If possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities.

Finally, I hope you will expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you.

Sincerely,

Margaret Wood

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I commend the proposal in your draft management plan's preferred alternative to add nearly 51,000 acres of wilderness to Great Sand Dunes National Park and Preserve. Wilderness will help protect the park's oldest archaeological sites, its endemic species and the renewal process for the very dunes for which the park is named.

To the extent possible, please minimize roads and parking lots within the park and try to locate new motorized access outside the park, primarily on existing roads, through cooperative agreements with other governmental agencies and relevant entities.

I very much favor restricted access to the park's sensitive archaeological sites and, in aid of that, I urge the Park Service to conduct archaeological surveys on all park lands as soon as possible.

Finally, I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Thank you for considering my comments.

Sincerely,

Eleanor Kuhl

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

GOOD WORK!!!!!!!!!!

I commend the proposal in your draft management plan's preferred
alternative to add nearly 51,000 acres of wilderness to Great
Sand Dunes National Park and Preserve. Wilderness will help
protect the park's oldest archaeological sites, its endemic
species and the renewal process for the very dunes for which the
park is named. Wilderness will also help ensure that future
generations may continue to enjoy the park's solitude, quiet,
and quite astonishing range of landforms and species.

Having said that, I strongly urge you to add sand sheet lands in
the northwest corner of the park to your wilderness proposal.

Only one gravel road separates them from other deserving wilderness. Wilderness protection becomes increasingly important given that you propose this area as a backcountry access zone: please recommend wilderness protection for lands not slated for access roads and parking lots if such structures are necessary.

Thank you for your efforts

Sincerely,

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I strongly urge you to add sand sheet lands in the northwest
corner of the park to your wilderness proposal.

I would also suggest that you propose wilderness protection for
wilderness-quality lands surrounding Medano Ranch.

Please minimize roads and parking lots within the park and try
to locate new motorized access outside the park, primarily on
existing roads, through cooperative agreements with other
governmental agencies and relevant entities. Please direct
trails and visitor use away from sensitive riparian zones, such
as the Deadman Creek corridor, and please note that I very much
believe that motorized and mechanized travel are inappropriate

in the park's backcountry.

I strongly urge you to expedite the purchase of subsurface mineral rights to protect the park from energy-related intrusions.

Sincerely,

Michelle Norton

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I support the preferred alternative that adds 51,000 acres of
wilderness to GSDNPP, and would love to see added as well (1)
the sand sheet lands (NW) and the sabhka around Medano Ranch.

I wish also to add that I abhor ATVs and their ilk and prefer to
see them only in highly disturbed areas, as they are highly
disturbing themselves.

Please do restrict access to vulnerable archaeological sites so
that they may be in good condition for future generations.
Educational, guided access is the absolute best way to ensure
their appreciation and protection.

Finally, I heard this idea from someone else and think it is a
great idea. Please do buy back subsurface mineral rights as soon
as you can!

Thank you for considering my comments. Best of luck.

Sincerely,

Kunda Lee Wicce

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

I strongly urge you to add the sand sheet area to your
wilderness proposal.

Also, please propose wilderness protection for lands with
wilderness characteristics around the Medano Ranch.

Lastly, I ask you to purchase the mineral rights to protect the
park from energy-related development.

Thank you.

Sincerely,

Dick Artley

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

Your draft management plan for Colorado's Great Sand Dunes has many good features, but more wilderness protection is called for in order to protect critters, historic sites, and the wild beauty and solitude for future generations. In addition, mineral rights should be acquired (or condemned) in order to prevent the intrusion of energy industry interests into this unique area.

Wilderness designation should be extended to include the area around Medano Ranch and the northwest part of the park.

Additional roads and parking lots within the park should not be constructed; rather, a shuttle system such as that at Zion or Rocky Mtn NP should be devised for peak season.

Thanks.

Sincerely,

James Swaney

Superintendent Steve Chaney
Great Sand Dunes National Park and Preserve
11500 Highway 150
Mosca, CO 81146

Dear Superintendent Chaney,

The concept of designated wilderness for major portions of the
park is encouraged. Legally fully designated wilderness areas
will best provide the a means to protect and preserve park lands
for future generations.

I suggest and support the decisions that would allow the maximum
amount of wilderness to be designated.

Thank you.

Sincerely,

michael Long
