A. PROJECT INFORMATION

Title: Yosemite Valley Administration Building Exterior Door Lock Replacement

Location: Yosemite Valley, Mariposa County, California

Project Manager: Tom Darcy, Facilities Management, Yosemite National Park

B. PROJECT DESCRIPTION AND BACKGROUND

This project will replace exterior door locks on this building for increased security and operational efficiency.

The door on west side of building currently has a "panic bar." This panic bar would be replaced with one that would look pretty much the same but it would be equipped with an electronic locking device. A "through-wire" hinge would be added to the door. It would be located just below the existing center hinge and would be the only additional component you would see on the exterior of that door. It would be a 4" hinge.

Wiring from the panic bar to the hinge would be concealed inside the door and a hole would be drilled through the door casing and the wall between the boiler room and the hallway. That hole would be drilled behind the hinge so it would only be visible from the boiler room. From there it would be tied into the controller and then to the electrical panel with conduit.

The door on the east side of the building (Lobby) would be fitted with a "storage function" accessible knob set to permit free egress from the building and prohibit entry unless you have a key. This would require adding a knob to the exterior of the door, just above the existing pull handle (where the existing lock cylinder is located) or if the existing door would accept a panic bar with an exterior lock cylinder the exterior appearance of the door would not change. Both of these options would change the interior appearance of the door as they will require replacing the existing interior knob with a door knob or a panic bar.

When implemented as detailed in the project description and following all Project Mitigations and Conditions listed below, this project meets the terms and conditions of a categorical exclusion to NEPA.

Applicable Categorical Exclusion:

Although adding new materials, the effects of this project would be essentially the same as those covered by DO12 3.4 C (4) - *Routine maintenance and repairs to cultural resource sites, structures, utilities, and grounds if the action falls under an approved Historic Structures Preservation Guide or would not adversely affect the cultural resource.*

Project Mitigations and Conditions:

1. Preferred alternative is lever handle on exterior versus panic hardware on interior. (Resources Management and Science)
2. If the door handle height must be changed from the existing height, coordinate with the park Historic Architect (Sueann Brown, 379-1222). (Resources Management and Science)

This project has been reviewed in accordance with the above criteria and it has been determined that the project will result in no or minimal environmental effects. Therefore, it is categorically excluded from further environmental review required under the National Environmental Policy Act. Additionally, the necessary compliance coordination has been completed with regard to the National Historic Preservation Act, the Wilderness Act, the Wild and Scenic Rivers Act, and the Endangered Species Act.

The door on the east side of the building (Lobby) will be fitted with a "storage function" accessible knob set to permit free egress from the building and prohibit entry unless you have a key. This will require adding a knob to the exterior of the door, just above the existing pull handle (where the existing lock cylinder is located) or if the existing door would accept a panic bar with an exterior lock cylinder the exterior appearance of the door will not change.
