

Install Mini-Split HVAC System in Chatham Farm Office
Photos

c1920 Chatham Farm Office

Exhaust from current floor air conditioner used in the IT Server Room

View inside the IT Server Room. Equipment is inside cabinet on the far wall.

The new wall-mounted HVAC unit will be placed on the wall to the left, where the shelves are now located.

The existing floor unit HVAC will be removed.

The room beneath the IT Server Room. The condensate line from the new HVAC unit will penetrate the ceiling of this room and empty into the sump in the floor.

A view of the IT Server Room floor from the room below. Two 3/4" holes will be drilled in the wood floor to facilitate access of the lineset, power and condensate lines.

The lineset and power lines will run through this existing chase into the adjacent room where the heat pump will be installed.

The room adjacent to the IT Server Room. The wood box will be removed and the heat pump will be installed in its place. The chase that will provide access for the lineset and power to the heat pump is located behind the box,

The chase that will provide access for the lineset and power to the heat pump.
