**Rationale for Surface Soil Samples**  
**Caneel Bay Site**

Sample ID	Location	Decision Unit Size	Reason for Sampling
IA-1-01	Northern portion of gravel staging area above WWTP	0.18 acres	Area historically used to store materials for disposal, including out-of-service mechanical equipment. Drums observed during 2016 RSE site visit (3E Consultants 2017).
IA-1-02	Southern portion of gravel staging area above WWTP	0.19 acres	
IA-1-03	Southwest corner (over the embankment) of the gravel staging area	0.006 acres	Dried paint indicative of dumping was observed during field work.
IA-1-04	Eastern side of gravel staging area at the toe of the slope	0.006 acres	Approximately 12 rusted drums containing washed gravel were observed during field work.
IA-2-01	To the north and east of the of engineering & maintenance buildings.	0.26 acres	Area historically used for equipment storage and maintenance. Level 2 investigation surface soil results exceed action levels for SVOCs and metals. Debris piles and overgrown vegetation required VHB to adjust some increment locations.
IA-2-02	To the north and west of the engineering warehouse.	0.14 acres	Area historically used for equipment storage and maintenance. Level 2 investigation surface soil results exceed action levels for SVOCs and metals. A leaking transformer is in this area, and the oily soil was not sampled (CBIA is responding separately to this transformer).
IA-2-03	To the east and northeast of the grounds and landscaping equipment maintenance building	0.15 acres	Grass that may have been affected by runoff from maintenance area. VHB modified the DU boundaries to avoid debris and concrete piles.
IA-2-04	To the south of the grounds and landscaping equipment maintenance building	0.15 acres	Area historically used for landscaping chemical storage and equipment maintenance/storage. Soil staining observed in pole barn during 2016 RSE site visit (3E Consultants 2017). Level 2 investigation surface soil results exceed action levels for metals. VHB adjusted some increment locations to avoid debris and a stack of utility poles.
IA-2-05	Area around the diesel and gasoline ASTs, emergency generator building, and fuel pump	0.21 acres	Area includes active diesel and gasoline ASTs, emergency generators, and fuel pumps. Multiple petroleum-related incidents reported in Level 1 assessment (Barksdale & Associates 2012). Level 2 investigation surface soil results exceed action levels for metals, TPH, and pesticides.

Sample ID	Location	Decision Unit Size	Reason for Sampling
IA-3-01	Northern portion of debris landfill	0.34 acres	Area historically used for disposal of "all types of wastes" from the resort (Barksdale & Associates 2014) and resort WWTP sludge (Barksdale & Associates 2012). Level 2 investigation surface soil results exceed action levels for metals, SVOCs, and pesticides.
IA-3-02	Southern portion of debris landfill	0.24 acres	
IA-3-03	Toe of slope/eroded bed along southern edge of landfill	0.01 acres	VHB observed an area of erosion with evidence of seeps (salt stains) along the sidewall. VHB created a linear DU beginning at the first seep and ending approximately 120 feet down the slope of the channel to the west.
IA-3-04	Southern eroded face of the landfill	0.01 acres	VHB observed apparent seeps along the southern face of the landfill.
IA-Ref-01	Reference area to south of WWTP	0.25 acres	Area not believed to be contaminated by site activities. Area will be used to evaluate background concentrations.
IA-Ref-02	Reference area to the east of the debris landfill	0.15 acres	Area not believed to be contaminated by site activities. Area will be used to evaluate background concentrations. The planned location was overgrown with vegetation and inaccessible. VHB moved the DU to a more accessible location outside the surveyed boundaries of buried waste.
